

Complicaciones de la consolidación

Thales Bregadioli
MV, Esp, Res, MSc, PhD. FMVZ/USP

Y ahora ?

AOVET

Objetivos

- ✓ Que pode llevar a una no unión
- ✓ Como evitar
- ✓ Como tratar

AOVET

Introdução

Consolidación...
Entorno biológico y mecánico que guías la consolidación

No uniones se describen:
"Fracaso del cirujano en lugar de fracaso de la osteogénesis"

- ✓ Decisión incorrecta
- ✓ Falla técnica

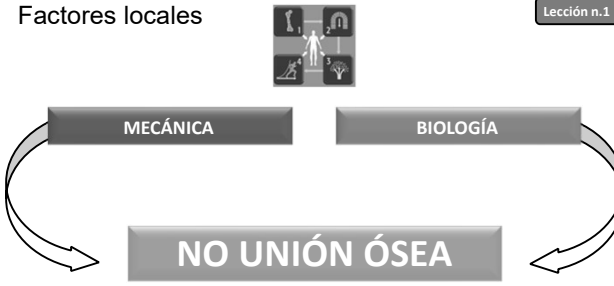

Definición

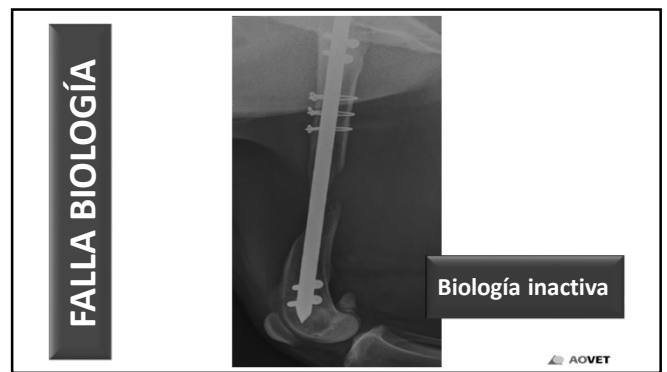

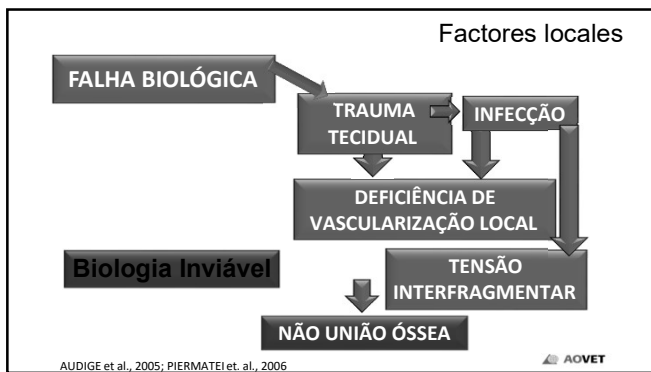

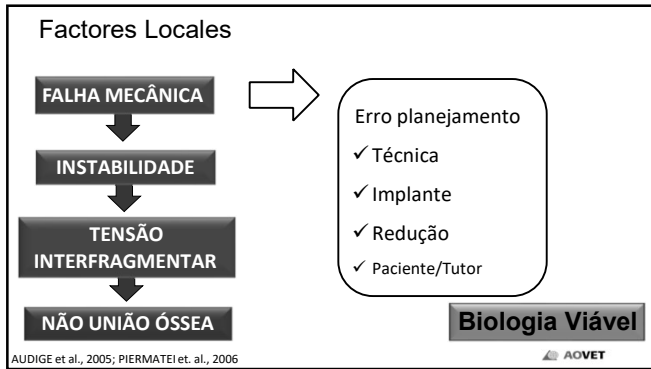

- ✓ Unión retardada: Fractura que no ha cicatrizado en tiempo normal.
- ✓ No unión: Fracaso de la cicatrización del hueso independientemente del tiempo. Signos radiográficos de ausencia de actividad osteogénica.
- ✓ Mala Unión: Fracaso en el restablecimiento de la forma y función mecánica del hueso fracturado.

Factores locales

Lección n.1

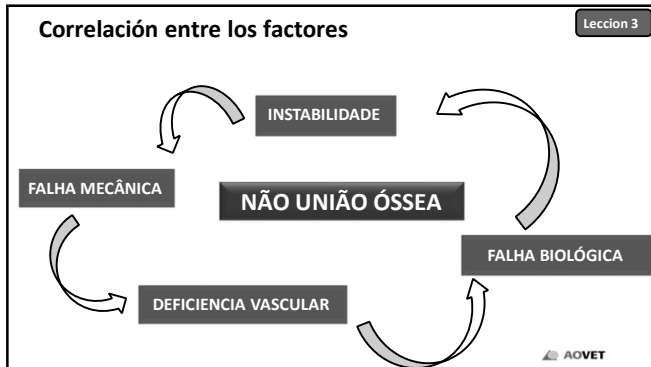

Factores locales

Fraturas abertas

- ✓ 2x mas propensas a unión retardada
- ✓ 4x mas chances de no unión

AOVET

Factores intrínsecos

✓ Menor lesão vascular

Influence of Anabolic Steroid on Tibial Fracture Healing in Rabbits – A Study on Experimental Model

FARIDA AHMAD, SYED MOBASHIR YUNUS, ADIL ASGHAR, N.A. FARUQI

Journal of Clinical and Diagnostic Research. 2013 January, Vol-7(1): 93-96

CONCLUSION

From the above facts, we can conclude that anabolic steroids produce a better fracture healing by exaggerating the periosteal bone formation and by achieving a high osteoblastic activity and a better mineralization of the callus.

Falla de implante

- Falla aguda

A stress-strain graph showing the relationship between stress and strain. The graph is divided into an 'Elastic region' and a 'Plastic region'. The y-axis is labeled 'Stress' and the x-axis is labeled 'Strain'. Points A, B, C, B', and C' are marked on the graph. To the right of the graph are two X-ray images of a dog's forelimb showing a fracture and a surgical plate.
